# Delta-Exam-Quiz-Questions

1. Relational OLAP, I	Multi-dimensional OLAP	are used for creating:
-----------------------	------------------------	------------------------

Select one:
Analysis data
Cubical data
• Dimensional Data 🔽
Design data
2. Most common source of change data in refreshing a data warehouse:
Select one:
Snapshot change data
Cooperative change data
Queryable change data
<ul> <li>Logged change data </li> </ul>
3. Dependent data mart:
Select one:
Allows you to combine input from sources other than a data warehouse
<ul> <li>Allows you to unite your organization's data into multiple data warehouses</li> </ul>
<ul> <li>Allows you to unite your organization's data into one data warehouse </li> </ul>
Uncontrolled proliferation of data
4. OLTP is format data and OLAP is format data:
Select one:

File and structure	
• Table and cube 🔽	
Cube and table	
5. True statement about a multidimensional model:	
Select one:	
Increasing the size of a dimension is difficult	
It typically requires less disk storage	
<ul> <li>Typical business queries requiring aggregate functions take more time</li> </ul>	
<ul> <li>It typically requires more disk storage </li> </ul>	
A -	
6. 'Measure' property is:	
Select one:	
Undefined set of data	
Building block of BI	
<ul> <li>Quantifiable data indicator </li> </ul>	
Defined set of data	
A	
7. Can you swap rows and columns in a cross tab?	
Select one:	
• True	
• False 🔽	
8. A subset of a data warehouse:	

• Table and file

Select one:	
Table	
• Data Marts 🔽	
• File	
Data Mine	
9. Tasks that are not part of a data wareh	ouse:
Select one or more:	
<ul> <li>Long database transactions </li> </ul>	
<ul> <li>Managing schema objects</li> </ul>	
<ul> <li>Application development </li> </ul>	
<ul> <li>Backing up the data</li> </ul>	
	A -
10. Identifying a Centipede fact table:	
Select one:	
Factless fact table	
<ul> <li>Fact table with no dimensions</li> </ul>	
• Fact table with too many dimensions [	
• Fact table with two or three dimensions	
44. To a character of the data was above as	
11. True about three-tier data warehouses	5.
Select one:	
<ul> <li>A data mart becomes a data warehouse v</li> </ul>	vhen it reaches a critical size

• The data marts are different groups of tables in the data warehouse

periodic times 🔽

• Once created, the data marts will keep on being updated from the data warehouse at

	ce created, the data marts will directly receive their new data from the operational abases
12. Fea	ature that usually applies to data in a data warehouse:
Select	one:
• Mo:	st applications consist of transactions
• Dat	ta are often deleted
• Rel	latively few records are processed by applications
• Dat	ta are rarely deleted 🔽
	mension table consisting of attributes that do not belong in the fact table or any ng dimension tables:
Select	one:
• Jur	nk dimension 🔽
• Slo	wly changing dimension
• Sta	able dimension
• Cor	nformed dimension
14. Co	rrect Class II ODS:
Select	one:
• Upo	dates into the ODS from the DW are unscheduled
• Syr	nchronization of updates occurs overnight
	dates between operational environment & ODS occurs between 24-hour frame
-	dates between operational environment & ODS occurs between 2-3 hour frame 🔽

15. Not a data cleaning step in ETL:

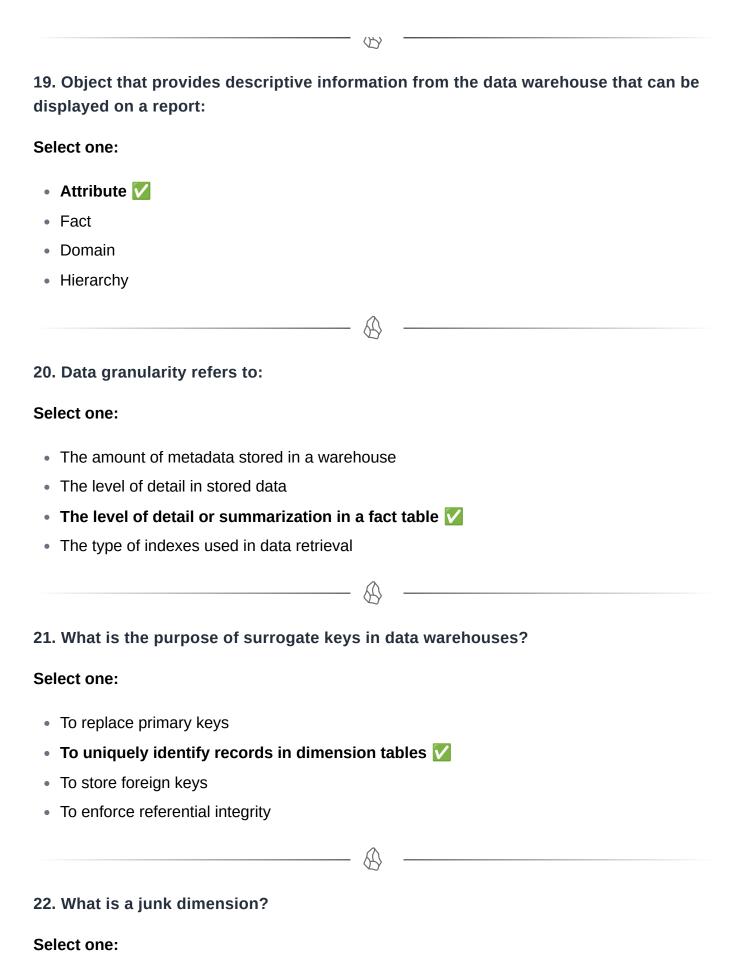

# Select one: Matching Standardizing Deleting Consolidating 16. Correct ETL tools: Select one or more: Job Tab Informatica - PowerCenter SAS - Data Integration Studio Oracle - Data Integrator 17. Correct statement about data warehouse: Select one: The data warehouse consists of data marts and operational data The data warehouse is used as a source for the operational data

- The data warehouse consists of data marts and historical data
- ullet The operational data are used as a source for the data warehouse  ${f V}$

# 8

# 18. Three major parallel computing platforms:

- Clusters or grids, MPP, HPC
- Database, SQL, network
- IaaS, PaaS, SaaS
- Network, cloud, multitenancy

A dimension that holds all redundant attributes

• /	A dimension that stores unrelated attri	outes that do not lit lifto other tables
• /	A slowly changing dimension	
• /	A dimension that is never used	
		A -
23.	Data warehouses are optimized for:	
Sele	ect one:	
•	High-speed transactions	
• [	Read-heavy analytical queries 🔽	
• (	Storing unstructured data	
• [	Multi-threaded processing	
		& <u> </u>
		W
24. /	A slowly changing dimension (SCD) tl	nat keeps historical records is known as:
	A slowly changing dimension (SCD) tlect one:	nat keeps historical records is known as:
Sele	ect one:	nat keeps historical records is known as:
Sele	ect one: Type 2 SCD 🔽	nat keeps historical records is known as:
Sele	ect one:  Type 2 SCD   Type 1 SCD	nat keeps historical records is known as:
Sele	Type 2 SCD  Type 1 SCD Type 3 SCD	nat keeps historical records is known as:
Sele	ect one:  Type 2 SCD   Type 1 SCD	
Sele	Type 2 SCD  Type 1 SCD Type 3 SCD	nat keeps historical records is known as:
Sele	Type 2 SCD  Type 1 SCD Type 3 SCD	
	Type 2 SCD  Type 1 SCD Type 3 SCD Junk dimension	
Sele	Type 2 SCD   Type 1 SCD  Type 3 SCD  Junk dimension  What is the role of metadata in a data	
Sele	Type 2 SCD  Type 1 SCD Type 3 SCD Junk dimension  What is the role of metadata in a data ect one:	
Selection Select	Type 2 SCD  Type 1 SCD Type 3 SCD Junk dimension  What is the role of metadata in a data ect one:  Storing raw transaction data	
Sele	Type 2 SCD  Type 1 SCD Type 3 SCD Junk dimension  What is the role of metadata in a data ect one:  Storing raw transaction data  Providing information about the structure.	
Sele	Type 2 SCD  Type 1 SCD Type 3 SCD Junk dimension  What is the role of metadata in a data ect one:  Storing raw transaction data  Providing information about the structure of th	

## S

Sel	ect one:
•	A relational database optimized for OLTP
•	A centralized repository that stores structured and unstructured data $\overline{m{ec{v}}}$
•	A subset of a data warehouse
•	A visualization tool
27.	Which SQL clause is commonly used in OLAP queries?
Sel	ect one:
•	INSERT
•	GROUP BY 🔽
•	UPDATE
•	DELETE
28.	A snowflake schema:
Sel	ect one:
•	Uses denormalized data
•	Uses normalized data with multiple related dimension tables $\overline{m{V}}$
•	Stores only fact tables
•	Is the most commonly used schema
	♠ —

29. A data warehouse follows which type of architecture?

- Relational
- Multidimensional 🔽
- Object-oriented
- Hierarchical

	. \
CF	V
V	

30. What does a data staging area do in ETL?

#### Select one:

- Stores final processed data
- · Serves as a backup for the data warehouse
- Holds extracted data before transformation and loading
- Provides a user interface for reporting

# **Questions related to Schemas, ETL, SCDS**

1. What is a key characteristic of a star schema?

#### Select one:

- Denormalized dimension tables
- Highly normalized structure
- Uses surrogate keys
- · Data stored in flat files

2. Which of the following is true about a snowflake schema?

#### Select one:

- ullet Dimension tables are normalized to reduce redundancy  ${f ilde{V}}$
- All dimension tables are denormalized
- Only fact tables are normalized
- It does not support OLAP queries

3. The primary advantage of a snowflake schema over a star schema is:

# S

Select one:	
<ul> <li>Reduced storage space due to normaliz</li> </ul>	ation 🗸
<ul> <li>Faster query performance</li> </ul>	
<ul> <li>Fewer joins needed in queries</li> </ul>	
<ul> <li>Better for transactional processing</li> </ul>	
4. What is the main advantage of a star sc	hema?
Select one:	
Uses fewer tables than a snowflake schem	a
• Simplifies queries and improves perform	nance 🔽
<ul> <li>Reduces data redundancy</li> </ul>	
<ul> <li>Normalized dimension tables</li> </ul>	
5. Which type of schema contains both sta	ar and snowflake elements?
Select one:	
• Galaxy Schema 🔽	
Hybrid Schema	
Flat Schema	
<ul> <li>Dimensional Schema</li> </ul>	

# 6. In ETL, what is the role of the transformation step?

- Extracts data from source systems
- Loads data into the data warehouse
- ullet Cleans, formats, and restructures data before loading  ${f ilde{V}}$
- Stores metadata

<i>₩</i>
7. Which of the following is NOT a key component of ETL?
Select one:
• Extraction
Transformation
• Encryption 🔽
• Loading
8. What does the loading phase in ETL do?
Select one:
Extracts data from source systems
$ullet$ Stores transformed data into the data warehouse ${f igvee}$
Moves data from one OLTP database to another
Cleans data
9. What is an incremental ETL process?
Select one:
<ul> <li>Loads only new or changed data instead of full dataset </li> </ul>
Reloads the entire dataset every time
Only transforms the data without extracting it
Deletes old records before loading
10. What is Slowly Changing Dimension (SCD) Type 1?
Select one:

ullet Overwrites old values with new ones without keeping history  ${f ilde V}$ 

• Maintains historical records by adding new rows

<ul> <li>Keeps both old and new values in s</li> </ul>	separate columns
Uses surrogate keys to track history	/
	&
11. Which Slowly Changing Dimens	ion (SCD) type maintains full historical records
Select one:	
SCD Type 1	
• SCD Type 2 🔽	
• SCD Type 3	
Hybrid SCD	
	&
10 L. 00D T 0 ha historical	data at a sado
12. In SCD Type 3, how is historical	data stored?
Select one:	
Uses separate columns for old ar	nd new values 🔽
<ul> <li>Stores history in new rows</li> </ul>	
• Replaces old values with new ones	
<ul> <li>Deletes old records</li> </ul>	
	B
13. What is a surrogate key in a data	a warehouse?
Select one:	
• A primary key from the source datal	base
	base
A primary key from the source datal	
<ul><li>A primary key from the source datable</li><li>A natural key used for queries</li></ul>	
<ul> <li>A natural key used for queries</li> <li>A system-generated unique key unique</li> </ul>	

#### Select one:

- Store descriptive attributes
- Contain measurable business data
- · Contain only textual data
- Do not have foreign keys

#### 15. In a star schema, dimension tables are connected to:

#### Select one:

- Other dimension tables
- A central fact table
- Multiple fact tables
- The staging area

#### 16. What is a junk dimension?

#### Select one:

- A duplicate of another dimension
- A type of slowly changing dimension
- ullet A dimension table storing miscellaneous attributes that do not fit in other tables  ${f V}$
- A table containing only surrogate keys

# 17. What happens in a full ETL refresh?

- ullet All data in the warehouse is deleted and reloaded from scratch  ${f V}$
- Only new or updated records are loaded
- Data is transformed without extraction
- The ETL pipeline is skipped

18. What does an ETL staging area do?
Select one:
<ul> <li>Temporarily holds extracted data before transformation and loading </li> <li>Acts as the final storage for processed data</li> <li>Stores metadata for ETL tools</li> <li>Generates reports</li> </ul>
19. What type of ETL process ensures data consistency and recovery from failures?
Select one:
<ul> <li>Incremental ETL with change tracking ✓</li> <li>Full ETL refresh</li> <li>One-time data migration</li> <li>Batch processing</li> </ul>
8
20. Why do star schemas have better performance than snowflake schemas?
Select one:
<ul> <li>Fewer joins are required in queries </li> <li>Normalization improves storage</li> <li>They use composite keys</li> <li>They store unstructured data</li> </ul>
21. A degenerate dimension:
Select one:
<ul> <li>Is a dimension key stored in a fact table without a separate dimension table </li> </ul>

• Contains only numeric measures

• [5	s the same as a junk dimension			
22. V	What is the role of metadata in ETL?			
Sele	ect one:			
• [	Describes the structure, rules, and lineage o	data 🔽		
• 5	Stores business intelligence reports			
• C	Contains transaction logs			
• F	Provides real-time analytics			
	9			
23. V	Which ETL tool is widely used for enterpris	e data integra	tion?	
_				
	et one:			
	ect one:			
Sele	ect one: nformatica PowerCenter 🔽			
Sele	_			
Sele • II • E	nformatica PowerCenter 🔽			
Sele • II • E • N	nformatica PowerCenter			
Sele • II • E • N	nformatica PowerCenter ✓ Excel MongoDB			
Sele • II • E • N	nformatica PowerCenter ✓ Excel MongoDB			
Selection Select	nformatica PowerCenter ✓ Excel MongoDB			
• II • E • N • G	nformatica PowerCenter ✓ Excel MongoDB Google Sheets			
Selection Selection	nformatica PowerCenter ✓ Excel MongoDB Google Sheets  What is a role-playing dimension?	ı for different o	contexts V	
Selection 11 Selection 12 Selec	nformatica PowerCenter ✓ Excel  MongoDB Google Sheets  What is a role-playing dimension?  ect one:	ι for different α	contexts V	
Selection A	nformatica PowerCenter   Excel  MongoDB  Google Sheets  What is a role-playing dimension?  ect one:  A dimension used multiple times in a schem		contexts V	
Selection A	Informatica PowerCenter  Excel  MongoDB  Google Sheets  What is a role-playing dimension?  Ect one:  A dimension used multiple times in a schem  A dimension that contains junk attributes		contexts 🗸	
Selection A	Informatica PowerCenter  Excel  MongoDB  Google Sheets  What is a role-playing dimension?  A dimension used multiple times in a schemy of the dimension that contains junk attributes  A dimension that only appears in snowflake sch	emas	contexts 🔽	

#### Select one:

•	To normalize dimension tables				
•	To ensure consistency across multiple fact tables 🔽				
•	To track historical changes				
•	To store transactional data				
	<b>B</b>				
26.	How does SCD Type 2 typically store historical changes?				
Sel	ect one:				
•	By adding a new row with a surrogate key for each change 🔽				
•	By updating the existing row				
•	By deleting the old record				
•	By using an index table				
	♠ ————————————————————————————————————				
27.	What type of ETL transformation removes duplicate records?				
Sel	ect one:				
•	Data enrichment				
•	Deduplication				
•	Aggregation				
•	Pivoting				
	A -				
28.	In which scenario is a snowflake schema preferred over a star schema?				

- ullet When storage space is a concern and normalization is required  ${f v}$
- When faster query performance is needed
- When data is primarily unstructured
- When there are no foreign key constraints

/ \ \	. 1
( [	╮
V	- 7

## 29. What is the primary purpose of ETL job scheduling?

#### Select one:

- To extract data in real time
- ullet To automate data extraction, transformation, and loading at predefined intervals  ${f V}$

- To load data without transformation
- To reduce query execution time

# 30. What happens in an SCD Type 4 implementation?

- A history table is maintained separately from the main dimension table
- Old values are overwritten with new ones
- Changes are tracked using additional columns
- ullet A history table is maintained separately from the main dimension table  $\overline{V}$
